REAR PANELS

Turbulent air forms above the cargo bed and behind the cab when you add a windshield. This swirl can carry dirt, dust, leaves, and rain into the cab. Eliminate this phenomenon and **control the swirl** by installing a rear panel.

FOR THE LIFE OF YOUR RIDE

POLARIS ENGINEERS PARTS THAT PUSH THE LIMITS WITHOUT SACRIFICING STRENGTH AND DURABILITY. We build our products so anyone with the right tools can maintain their vehicle from their own garage - and get them back on the trails where they belong.

MAINTENANCE TIP

BREAK-IN PERIOD

The break-in period for your new GENERAL is the first 25 hours of operation, or the time it takes to use the first two tanks of fuel. No single action on your part is as important as a proper break-in period. Careful treatment of a new engine will result in more efficient performance and longer life for the engine.

NOTICE: Excessive heat build-up during the first three hours of operation will damage close-fitted engine parts. Do not operate at full throttle or high speeds for extended periods during the first three hours of use.

AIR FILTERS

A clogged air filter can restrict air flow to the engine leading to reduced engine performance, engine life or catastrophic failure.

BRAKE PADS

Maintaining and/or replacing brakes are critical to the safety and functionality of a vehicle. Brake pads should be checked for wear and oil or grease (petroleum products) contamination and brake discs should be checked for cracks, excessive corrosion or warping.

HALF SHAFT

Check for tear and punctures in the boot which can lead to CV joint wear that can contribute to axle failure.

DRIVE BELTS

Polaris Engineered belts deliver unmatched performance for your off-road vehicle. Developed and tested on all our engines for all environments and conditions. Check your belt for delamination, hour glassing and glazing.

BREAK-IN PERIOD

- Use lower gear (if available) while varying speeds and avoiding wide open throttle for 8-16 km
- If no low gear is available, vary at moderate speeds while avoiding wide open throttle for 80 km

OUR INVESTMENT

- 32,187 km of field testing
- Thousands of dyno hours
- 18+ months of development (3,000+ design hours) per belt
- 1200+ vehicle validation hours
- Collaboration with powertrain & clutch engineers

YOUR ADVANTAGE

- No clutch recalibration
- Less wear & tear due to heat
- Ensure maximum vehicle performance
- More time riding, less time wrenching
- Produced in collaboration with powertrain and clutch engineers to ensure a perfect fit, maximum performance and ultimate durability

BATTERIES

To ensure a battery maintains its level of charge when unused for extended periods of time or during freezing weather, the battery should be connected to a suitable battery charger. Consult your dealer to ensure the charger is compatible with your vehicle.

OIL FILTERS

Change oil filters with every oil change to provide the best engine protection and keep the engine operating at peak performance.

SPECIFIC NEEDS, SPECIFIC OILS

Polaris invests millions in engine development, and part of that investment is making sure its lubricants—critical to engine performance—are the right formula for your specific engine. The amount of testing data and engineering resources used in developing Polaris lubricants would overwhelm an aftermarket company. Therefore, the aftermarket must spec an oil to an industry-wide standard that must account for a variety of operating parameters.

PS-4 is designed specifically for Polaris 4-cycle engines and has high film strength and wear protection under extreme loads and temperatures. Exclusive anti-wear additives protect engine parts with extra rust and corrosion protection.

ENGINEERED PARTS
& LUBRICANTS

FOR THE LIFE OF YOUR RIDE ONLY THE BEST WILL DO

To create the best oil for any terrain, we invest in rigorous testing to ensure our oil delivers the consistency and performance you demand. The results are Polaris Engineered Lubricants that are tested and perfected to deliver excellent total engine protection for the life of your ride.

WHAT COUNTS IN OIL TESTING:

1. Does it protect the engine at high temperatures?
2. Does it keep the engine free from carbon and buildup?
3. Does the oil hold its viscosity over time?

ENGINE CHECKPOINTS

When evaluating an engine oil and its ability to protect and preserve the engine's power output and lifespan, Polaris engineers focus on key areas within the engine, some of the most critical ones include:

RING LANDS: Poor oxidative performance can lead to carbon and varnish buildup, which results in poor ring seal and loss of power, combustion blow by and fuel dilution of the oil.

PISTON RINGS: During the combustion process, extreme pressures are placed on the top ring, forcing it outward toward the cylinder wall, sealing the combustion chamber. With so much force applied, poor oil film strength between the top ring and the cylinder wall can lead to cylinder wear and loss of power.

ROD BEARINGS: Engine bearings ride on an extremely thin hydrodynamic film of oil. Poor oil film strength or using an oil with a thinner viscosity, can lead to premature bearing wear or even engine failure. Using an oil with high film strength and a strong viscosity, like PS-4 full synthetic, will extend the service life of your engine.

CAMSHAFT: Direct Acting Overhead Camshafts are used on many Polaris Prostar Engines. In this application the camshaft pushes directly on the valve, creating very high contact pressures compared to other camshaft configurations. These forces are so great that inferior oil can break down and be forced out of the contact area leading to increased wear. PS-4 full synthetic additives are specifically designed to provide wear protection against this.
